Video Learning and In-class Activity for Learning Managerial Economics

Dr. Ku, Fred Kei-Tat (Presented by Lin, Yun Kuan) Department of Decision Sciences and Managerial Economics, CUHK Business School

The project is supported by MMCDG

About the Project

Application in class Student's Evaluation

Project Objective

The project aims to enhance students' learning experience and encourage interactions between teacher & students and also among students with pre-class teaching videos and in-class activities. One key quality of business students is being able to build different strategies corresponding to different markets and competitions. The pre-class videos developed by our project demonstrate the associated economic theories, and the in-class interactive game - the Business Competition Simulation (BCS) game engages students and encourages them to apply the knowledge and insights gained from the theories.

Learning Objective

1. Develop the ability to analyze market situation and build a business strategy

2. Understand differences Student between Monopoly, Cournot & Stackelberg competition

1.Understand student's weakness & need improved points

3. Develop team work ability

2.Understand student's learning performance & ability of applying knowledge

Teacher

Learning Process

To enable student to learn with new method, they are required to preview online videos and then participate in in-class competition simulation activity.

Knowledge acquisition: Mini-video lectures for learning basic concepts in market type theories

Knowledge application: In-class activities for applying basic concepts in previous phase

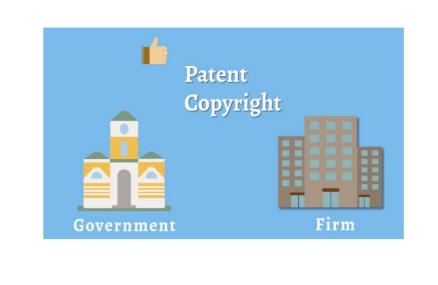

Knowledge co-creation: Debriefing session for experience sharing with all students & teacher

Knowledge reflection: Group essay and short reflective essay for after-class knowledge reviews

About the Project

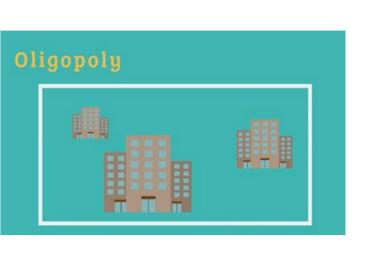

Application in Class | Student's Evaluation

Pre-class online video review

pre-class for knowledge of market types & tips for decision making.

Videos prepared

In-class Business Competition Simulation Game

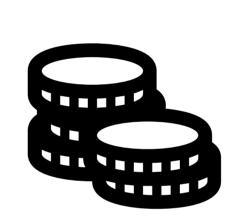

Students participate in a simulation game to apply knowledge they learnt. The participation in class game promotes higher-order thinking and collaborative skills.

Facing the competition, how would we compete

Debriefing session and Results Review

After each round, teacher will lead students to review the results so students enable Why are we

to improve their decision.

Teacher will also lead the class and

Was the outcome consistent with the theory?

conduct a debriefing session with all students to reflect & review the experience learnt.
